PROFESSIONAL SUMMARY

Software engineer specializing in backend services and data-intensive systems, with experience using Python, FastAPI, SQL, and React. With hands-on experience shipping full-stack applications end-to-end, including unit and integration testing behind them.

TECHNICAL SKILLS

Programming Languages: Python, Java, TypeScript, JavaScript, SQL

Backend: FastAPI, SQLAlchemy, PostgreSQL, REST API, Redis

Frontend: React, Vite, Tailwind CSS

AI/ML: XGBoost, Supervised Learning, Model Validation, OpenAI API, RAG, pgvector, LLM Evaluation, PyTorch

DevOps and Tools: Git, Docker, Airflow, Supabase, GitHub Actions, Claude Code

Testing: Pytest, Vitest, Playwright, Unit Testing, Integration & E2E Testing

PROJECTS

[Live Sports Analytics Platform](#) | *Python, FastAPI, React.JS, TypeScript, Tailwind, Supabase, Docker, Unit testing*

- Built a React/FastAPI sports analytics app that unifies live scores, odds, and prop context across numerous leagues so fans aren't jumping between sites and raw feeds
- Designed and shipped end-to-end: React/TypeScript UI (league hubs, prop boards, game centers), FastAPI read APIs with typed contracts, and scrapers/ingest for ESPN, MLB Stats, sportsbooks, and DFS lines into Postgres.
- Unified 8+ live/scrape feeds (ESPN, MLB Stats, Parlay/Sharp, PrizePicks, Underdog, ProphetX, Pinnacle, RotoWire) into one React/FastAPI app across numerous leagues

[Player Prop Prediction Models](#) | *Python, Xgboost, Hypothesis testing, Supervised Learning*

- Tested whether XGBoost quantile models, combining predicted minutes with per-minute stat rates, could generate profitable probability distributions for player prop betting
- Built a naive-to-linear-to-XGBoost model ladder with leak-proof, date-safe validation and a shared library standardizing testing across 4 stat categories and 2 leagues
- Reduced prediction error 27% vs. baseline (3.75 vs. 5.15 MAE) on a 20K+ game blind holdout (p approx. 1e-298); caught an overfit tuned model before it shipped

[MLB Research Bot](#) | *Next.js, FastAPI, PostgreSQL/pgvector, Redis, Docker, OpenAI*

- Built an MLB Q&A app over 130K+ player records that answers through 11 allowlisted SQL tools so every statistic is cited from Postgres, not generated by the model
- Covered the API and UI with 240 tests, including hallucination cases that retract unsourced numbers, and shipped a 4-service Docker Compose stack on GitHub Actions.
- Packaged ingest and serving as a 4-service Docker Compose stack (Postgres/pgvector, Redis, API, web) with GitHub Actions that migrate from scratch and fail the build if database-backed tests are skipped.

EDUCATION

BSc in Data Science, Minor in Computer Science
Saint Mary's College of California

May 2026
Moraga, CA

LEADERSHIP & ACTIVITIES

Tech Club | Vice President

2025–2026

- Organized weekly workshops and technical events for 20+ members
- Connected with industry professionals and invited guest speakers to share career advice
